

EPD for KRINNER ground screws

KRINNER is going **greener** 

With the EPD (**Environmental Product Declaration**), we create an important basis for the **sustainability assessment** of KRINNER foundation systems. An EPD describes building materials or building components in regard to their environmental impact on the basis of **eco-balances** as well as their functional and technical properties. This quantitative, objective and verified information relates to the **entire life cycle** of the ground screw.

-  Type III environmental label
-  Unique to the KRINNER ground screws
-  **Standardized life cycle analysis** (based on ISO 14025 and EN 15804)
-  Analysis of product-related emissions & environmental impact
-  Basis for **internationally recognized certificates** such as DGNB; BREEAM; LEED   
-  Valid for 5 years
-  Whether it's **architects, planners, engineers, builders or auditors** - any interested party can use the officially available EPD to get an overview of the life cycle assessment values as well as product-related environmental impacts of the KRINNER ground screw.
